

*Copper Bella*

## **FACT SHEET**

### **WHAT IS IT MADE OF?**

- ◆ A highly weatherable, extremely durable Engineering Thermoplastic.

### **WILL THE COPPER CHIP OR PEEL?**

- ◆ No. The electroplating process used to apply the copper creates an extremely strong bond between the materials.

### **WILL IT CRACK OR DENT?**

- ◆ No. This is the same type of plastic material used in automotive bumpers. It is extremely tough and resilient. Hail will not dent it.

### **WILL IT CHANGE COLORS OVER TIME?**

- ◆ Our copper is 99.9% alloy free, a perfect match to architectural copper sheet products. This allows for a perfect match when combining our products with sheet copper products. You can expect Copper Bella products to patina at the same rate to a beautiful bronze, or verdigris, depending on the atmosphere where it is installed.

### **WHY IS IT SO MUCH LESS THAN COMPARABLE SHEET PRODUCTS?**

- ◆ We have simply applied the technology of today to a very old craft. It has allowed us to offer beautiful products that every homeowner can afford.

### **WHAT OTHER FINISHES DO YOU OFFER?**

- ◆ Verdigris is available on all plated products for a small additional charge . We also have non-plated molded in colors. We will gladly offer color matching to corporations that would like to add our products as accessories to their existing lines. For example, guttering and fencing.
